

RECLAMATION

Managing Water in the West

Operation of Flaming Gorge Dam Draft Environmental Impact Statement

The mission of the Department of the Interior is
to protect and provide access to our Nation's
natural and cultural heritage and honor our trust
responsibilities to Indian tribes and our
commitments to island communities.

The mission of the Bureau of Reclamation is
to manage, develop, and protect water and
related resources in an environmentally and
economically sound manner in the interest of
the American public.

U.S. Fish and Wildlife Service
State of Utah, Department of Natural Resources
United States Department of Agriculture, Forest Service
U.S. Department of Energy
Western Area Power Administration
Utah Associated Municipal Power Systems

Abstract:

The Secretary of the Interior, acting through the Bureau of Reclamation, proposes to take action to assist in the recovery of four endangered fish in the Green River downstream from Flaming Gorge Dam, a Colorado River Storage Project facility in northeastern Utah, with a reservoir located in Utah and Wyoming. The purpose of the proposed action is to operate Flaming Gorge Dam to protect and assist in recovery of the populations and designated critical habitat of four endangered fishes, while maintaining all authorized purposes of the Flaming Gorge Unit of the Colorado River Storage Project, particularly those related to the development of water resources in accordance with the Colorado River Compact. This draft environmental impact statement has been prepared pursuant to the National Environmental Policy Act to analyze the effects of operating Flaming Gorge Dam in accordance with a set of flow and temperature recommendations developed by the Upper Colorado River Endangered Fish Recovery Program.

The comment period for this draft environmental impact statement ends on November 15, 2004.

TABLES (CONTINUED)

	<i>Table No.</i>	<i>Page No.</i>
4-17 Action Alternative Flaming Gorge Reservoir Water Levels (in Feet Above msl) by Hydrologic Condition and Month	follows page	204
4-18 Annual Water-Based Visitation for Green River and Flaming Gorge Reservoir for Action Alternative	204	
4-19 Annual Water-Based Activity Valuation for Green River and Flaming Gorge Reservoir for Action Alternative	207	
4-20 Percent of Time Flaming Gorge Reservoir Recreation Activities Are Unsafe	209	
4-21 Percent of Time Green River Recreation Activities Are Unsafe	211	
4-22 No Action Alternative Recreation Expenditures	follows page	216
4-23 No Action Alternative	follows page	216
4-24 Action Alternative Recreation Expenditures	follows page	216
4-25 Action Alternative Average Condition	218	
4-26 Action Alternative Wet Condition	219	
4-27 Action Alternative Dry Condition	220	
4-28 Green River Commercial Operator Hydrology Comparisons	follows page	222
4-29 Flaming Gorge Reservoir Commercial Operator Hydrology Comparisons	follows page	222
4-30 Comparisons of the Alternatives and a Cumulative Impact Simulation.....	232	
4-31 Cumulative Impacts on Native Fish.....	233	

FIGURES

	<i>Figure No.</i>	<i>Page No.</i>
3-1 Figures 3-1 and 3-2 depict the magnitude of algal blooms at Flaming Gorge in 1975 and in 1992 during years with minimal summer drawdown.....	51	
3-2 See above	52	
3-3 Green River Historic Flows at Greendale, Utah, Located 0.25 Mile Downstream From Flaming Gorge Dam.....	53	
3-4 2002 Hourly Temperature Variations From Flaming Gorge Dam to the Yampa River Confluence	58	
4-1 Average End-of-Month Flaming Gorge Reservoir Elevations	128	
4-2 February Reservoir Elevation Distribution Plot	129	
4-3 June Reservoir Elevation Distribution Plot	129	
4-4 Reach 1 Average Monthly Flows	133	
4-5 Reach 1, 1-Day Peak Flow Distribution	133	
4-6 Reach 2 Average Monthly Flows	135	
4-7 Reach 2, 1-Day Average Peak Flow Distribution.....	136	
4-8 Reach 3 Average Monthly Flows	137	
4-9 Reach 3, 1-Day Average Peak Flow Distribution.....	138	

FIGURES (CONTINUED)

<i>Figure No.</i>		<i>Page No.</i>
4-10	Reservoir Elevation Comparison for the End of September.....	140
4-11	Average Monthly Total Load Sediment Transport in Reach 1	144
4-12	Average Monthly Sand Load Transport in Reach 2	146
4-13	Average Monthly Sand Load Transport in Reach 3	148
4-14	Thermal Units Accumulated in Upper Lodore Canyon (46 Miles Below Flaming Gorge Dam) Under Various Hydrologic Scenarios.....	160
4-15	Thermal Units Accumulated in Upper Lodore Canyon (46 Miles Below Flaming Gorge Dam) Under Various Hydrologic Scenarios.....	244
4-16	Cumulative Area of Priority Depression Flood Plain Inundated at 13,000 cfs and 18,600 cfs and Proportion of Larvae Entering River Mile According to Distance Downstream From the Razorback Spawning Bar.....	246
